Write answers to the questions posted by your patients

1. Yes, it is still possible to develop cavities with veneers. Any part of the tooth which was not covered with porcelain can still get decay.
2. The whitening toothpaste especially designed for veneers may be the answer. Sometimes diamond polishing is also recommended. If some stains do not want to disappear, than replacement is the only option.
3. The good choice will be here a special floss threader. Oral irrigators which use a stream of water to eliminate debris from between the teeth are also recommended.
4. Electric toothbrushes are recommended here, as they are frequently equipped in the timing device. They also provide the proper pressure and speed of brushing.
